

Environmental Policy

Basic Principles

NIPPON Group is committed to contributing to the realization of a sustainable society by aiming for harmony between people and the environment, while being deeply aware of the fact that its business activities have an impact on the environment.

Guidelines for Action

1. All employees will work diligently to realize the environmental policy by promoting environmental preservation activities and setting environmental targets.
2. We continuously improve our environmental management system to enhance our environmental performance.
3. We will comply with environmental laws and regulations as well as our own self-directed management standards, and cooperate with environmental policies of government and industry organizations.
4. We will take measures to prevent global warming, respond to climate change, and contribute to the realization of a low carbon society.
5. We will strive to build a resource-circulating society through efforts to reduce, reuse, and recycle waste, etc., and to properly manage chemical substances.
6. We will develop products and production technologies that are in harmony with the environment, taking into consideration their life cycles from raw material procurement, manufacturing, and distribution to consumption and disposal.
7. As a company dependent on water and land, we understand the importance of biodiversity, and we will work toward a

sustainable society by implementing preventive measures for water and soil pollution.

8. Through environmental education, we will improve the awareness and creativity of our employees, which will lead to environmental preservation activities.
9. By actively supporting the environmental activities of local communities, we will prevent local pollution as well as contribute to the health and safety of all stakeholders.
10. We will disclose appropriate information on our environmental preservation activities, strive to communicate with our stakeholders, and work with our suppliers to address environmental issues.
